### Abstracts

The global Overhead Cranes market was valued at 5829.53 Million USD in 2021 and will grow with a CAGR of 2.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Overhead Cranes is a type of crane found in industrial environments. An overhead crane consists of parallel runways with a traveling bridge spanning the gap. A hoist, the lifting component of a crane, travels along the bridge. If the bridge is rigidly supported on two or more legs running on a fixed rail at ground level, the crane is called a gantry crane (USA, ASME B30 series) or a goliath crane (UK, BS 466). China occupied 51.42% of the Asia-Pacific consumption market in 2017 with a CAGR of 1.38% for the past four years. India also shows strong growth momentum. For price trend analysis, a key variable in the performance of Overhead Cranes producers is raw material costs, specifically the speed at which any increase can be passed through to customers. For forecast, the Asia-Pacific Overhead Cranes revenue would keep increasing with annual growth rate with 2~3%. We tend to believe that this industry still has a good future, considering the current demand of Overhead Cranes.
