Ozone generators work by combining oxygen (O<sub>2</sub>) with energy to produce ozone (O<sub>3</sub>). When the oxygen molecules are exposed to energy, the two atoms are broken apart. The single oxygen atoms quickly bond in groups of three to form ozone. For industry structure analysis, the Ozone Generator industry is not concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 35.59 % of the revenue market. Regionally, Europe is the biggest production value area of valves, also the leader in the whole Ozone Generator industry. China occupied 29.14% of the production market in 2017. It is followed by Europe and North America, which respectively account for around 26.16% and 22.53% of the global total industry. Other countries have a smaller amount of production.
