Pain management is a stream of medical sciences that eases the suffering of patients who have chronic pain. Pain is managed by a particular set of drugs or devices to treat pain. Transcutaneous electrical nerve stimulators, neuro-stimulators, analgesia infusion pumps and radiofrequency ablaters are some of the pain management devices. Most of these devices block the pain gate mechanism, to block the passage of pain signals to the brain. Radiofrequency ablaters destroys nerves by generating heat to block the pain signals, Similarly, neuro-stimulator devices uses mild frequencies of current to block the passage of pain signals. These devices help in treating various painful conditions such as cancer, musculoskeletal injury and neuropathic pain.
