A palletizer or palletiser is a machine which provides automatic means for stacking cases of goods or products onto a pallet. Manually placing boxes on pallets can be time consuming and expensive; it can also put unusual stress on workers. The first mechanized palletizer was designed, built, and installed in 1948 by a company formerly known as Lamson Corp. There are specific types of palletizers including the row-forming which were introduced in the early 1950s. In row-forming palletizing applications loads are arranged on a row forming area and then moved onto a different area where layer forming takes place. This process repeats until a full layer of goods and products are configured to be placed on a pallet. As Chinese overall economic downward trend in the past few years, and international economic situation is complicated, in the next few years there will be many uncertainties, and coupled with Palletizing Machine industry in short supply on the market in the past few years, more and more companies enter into Palletizing Machine industry, the current demand for Palletizing Machine product is relatively low, lack of demand, excess supply. Ordinary Palletizing Machine products on the market do not sell well, Palletizing Machine's price is lower than past years. The signal of market price change indicates the trend in the Palletizing Machine industry, low-

end product has excess capacity.
