The global Palm Acid Oil market was valued at 45.13 Million USD in 2021 and will grow with a CAGR of 5.9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Palm Acid Oil (PAO) is a by-product obtained from chemical refining of Palm Oil which can be used for making laundry soaps, animal feed formulation, and bio-fuel (bio-diesel). The main uses of PAO are in animal feeds, in soap making and for distilled fatty acid production. This product is not now produced on any great scale outside Europe, because in Malaysia and Indonesia palm oil is refined by the physical process which gives PFAD rather than PAO. The largest waste by-product generated during the production of CPO is palm oil mill effluent (POME). For every ton of CPO produced, 2.9 tons of POME is generated. POME is the result of large quantities of steam and hot water used to clean the fruit and separate the shell and cake from the palm fruit. The water and steam are washed away on the mill floor and directed to waste ponds that gather the POME residue. POME consists of 3 to 5 % of Palm Acid Oil (PAO) and 95 to 97% of water. Once the PAO is processed and extracted from the POME, the PAO residue can be sold as a feedstock for the production of 2nd generation biofuels. Significant and lasting barriers make entry into this market difficult. These barriers include, but are not limited to: (i) product development costs; (ii) capital requirements; (iii) intellectual property rights; (iv) regulatory requirement; and (v) Transitions` unfair

methods of competition. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area, the future will still have more new investment enter the field. Even so, the market is intensely competitive. The study group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.
