Paramotor is the generic name for the harness and propulsive portion of a powered paraglider ('PPG'). There are two basic types of paramotors; foot launch and wheel launch. Foot launch models consist of a frame that combines powerplants (engine), caged propeller, and harness (with integrated seat) attached with quick release buckles to the operator's back. The global paramotor market largely derives its growth from the tourism industry. Increasing urbanization, changing demographics, evolving lifestyle, increased awareness of new products, growth in outdoor vacation trips, and rise in dual household incomes have helped the market grow.
