A parts washer is a piece of equipment used to remove contaminants or debris, such as dirt, grime, carbon, oil, grease, metal chips, cutting fluids, mold release agents, ink, paint, and corrosion from workpieces. Parts washers are used in new manufacturing and remanufacturing processes; they are designed to clean, degrease and dry bulk loads of small or large parts in preparation for assembly, inspection, surface treatment, packaging and distribution. Parts washers may be as simple as the manual 'sink-on-a-drum' common to many auto repair shops, or they may be very complex, multi-stage units with pass-through parts handling systems. Parts washers are essential in maintenance, repair and remanufacturing operations as well, from cleaning fasteners, nuts, bolts and screws to diesel engine blocks and related parts, rail bearings, wind turbine gears boxes and automotive assemblies. The largest sales market of Parts Washer is Asia-Pacific, with market share of about 52.34% in 2017, followed by Europe and North America, with market share of 22.05% and 18.20%. The Parts Washer market is mainly divided into Solvent-based and Water/Aqueous-based. The Water/Aqueous-based Parts Washer is the largest market and the market for solvent-based Parts Washer is expected to lose its attractiveness to aqueous-based Parts

Washer. In 2017, the sales market share of Water/Aqueous-based Parts Washer is 55.72%.
