The global PC Water / Liquid Cooling System market was valued at 174.32 Million USD in 2021 and will grow with a CAGR of 5.83% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The liquid cooling systems in a computer are a lot like the internal combustion engines found in most vehicles. A water-block is first set up on the CPU and through this the cooling water runs through the CPU before making its way to a radiator. Often, the radiator itself needs cooling of its own and is kept cool by a fan or a Peltier cooler. Liquid cooling is fairly complex method and is rarely used in computers despite its efficiency. The real danger that comes with liquid cooling is that in case of a coolant leak, the water can seep through to all the critical parts of the computer and can irreversibly damage your CPU. Corsair was the greatest manufacturer in the PC liquid cooling system industry, with the revenue market share of 33%. Corsair, Cooler Master, and DeepCool are top 3 companies that had a combined a market share close to 70% of the global total. China had the largest market share which account for 53.29%, and would witness a stable growth in following years.
