Abstracts

The global PCIe SSD market was valued at 1755.88 Million USD in 2021 and will grow with a CAGR of 27.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A PCIe SSD (PCIe solid-state drive) is a high-speed expansion card that attaches a computer to its peripherals. PCIe, or Peripheral Component Interconnect Express, is a serial expansion bus standard. PCIe slots can have different sizes, based on the number of bidirectional lanes that connect to it. PCIe SSD storage is an alternative to a server-side flash deployment. PCIe serves as the underlying transport layer for data on graphics cards or add-in cards. Data centers process and store business information and play a significant role in cloud operations. Due to their benefits such as scalability, reliability, and cost reduction, several small- and medium-sized enterprises have started to prefer running their business operations through cloud service providers (CSPs), colocations, and web-hosting cloud data. The increasing demand for CSPs will result in the requirement of automation in cloud-based data centers resulting in a decline in cloud storage costs. This, in turn, will lead to an increasing demand for public cloud storage where three-fourth of the enterprises across the world will be using cloud data centers to operate their businesses.
