Polyethylene of raised temperature resistance, short as PE-RT, is an advanced type of polyethylene to add extra performance characteristics such as enhanced strength at high temperatures to the traditional properties of polyethylene. Owing to enhanced mechanical properties at elevated temperature, PE-RT resins can be used in all hot water & heat distribution applications. The common monomers of polymerization include ethylene, Hexene, and Octene. In the 90s of last century, Dow first developed this product. In the past ten years, the industry maintained a rapid development. Many companies have expanded its production capacity. At the same time, these leading companies are developing new products and new technologies. In 2015, Lyondellbasell launched its own new products.
