The global Pea Protein Isolate market was valued at 38.14 Million USD in 2021 and will grow with a CAGR of 13.89% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Pea protein isolate is a food additive with a neutral taste which is extracted from pea, and has a typical legume amino acid profile. Although the market prospect of pea protein is very good, but there is a potential threat. That is pea protein and pea starch shares the same production line. Strictly speaking, pea protein is a byproduct of pea starch. Although Europe produces a large amount of pea protein, large amount of pea starch was also produced and could not be consumed locally. the main areas of consumption of pea starch are in the Asia Pacific region. But the whole Asia Pacific region is not enough to consume the whole pea starch, which wastes the resource of pea processing. Therefore, the development of pea protein requires a balance between the two product.
