Abstracts

The global Pedelec market was valued at 1140.76 Million USD in 2021 and will grow with a CAGR of 15.1% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A pedelec (from pedal electric cycle) is a bicycle where the rider's pedalling is assisted by a small electric motor; thus it is a type of low-powered e-bike. However, unlike some other types of e-bikes, pedelecs are classified as conventional bicycles in many countries by road authorities rather than as a type of electric moped. Pedelecs include an electronic controller which cuts power to the motor when the rider is not pedalling or when a certain speed - usually 25 km/h (16 mph) - is reached. Europe is expected to be the largest market with market share of 84.15% in 2018 for Pedelec during the forecast period. Following Europe, North America is the second largest market with share of 8.45% in 2018.
