Pediatric Cranial Remolding Orthoses is a device used to treat head shape deformities such as plagiocephaly, brachycephaly and scaphocephaly. The helmet treatment is effective in infants from 3-18 months of age, but optimal when started younger due to the decrease in growth rate as the child ages. This Pediatric Cranial Remolding Orthoses is custom fitted to the shape of the head and is designed to do two things. Firstly, it will act as a protective cushion to prevent undue pressure on one side of the head and allow for better distribution of the pressure along the bones of the skull. Secondly, the helmet is fitted in such a way as to allow for the bones of the skull to expand in the flat areas in response to the underlying growth of the brain. USA is the biggest production area of Pediatric Cranial Remolding Orthoses, also the leader in the whole valves industry. USA occupied 90.61% of the production market in 2015. USA was the largest consumption market in the world, which took about 64.84% of the global consumption volume in 2015. It is followed by Europe and Japan, which respectively have around 12.52% and 8.61% of the global total industry. Other countries have a small amount of consumption volume.
