Abstracts

The global PEGylated Proteins market was valued at 3541.34 Million USD in 2021 and will grow with a CAGR of 3.94% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

PEGylating has been widely used as a post-production modification methodology for improving biomedical efficacy and physicochemical properties of therapeutic proteins since the first PEGylated product was approved by Food and Drug Administration in the early 1990s. The threat of substitutes arises when there are similar products developed by competitors which satisfy the market needs. When consumers have access to substitute products which can satisfy their market needs, then manufacturers and suppliers lose their bargaining power. Consumers are able to purchase competitor's products if they are not satisfied with product price or quality. In order for suppliers to tackle the challenge of threat of substitutes, they have to innovate products which meet the needs of their target market segments.
