## Abstracts

The global Peptide Synthesizer market was valued at 67.1 Million USD in 2021 and will grow with a CAGR of 2.55% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Peptide Synthesizer is an instrument used for peptide synthesis according to the principle of solid phase peptide synthesis. Peptides are used to prepare epitope-specific antibodies, map antibody epitopes and enzyme binding sites and to design novel enzymes, drugs and vaccines. Peptide synthesis is characterized as the formation of a peptide bond between two amino acids. China is the emerging market of peptide synthesizer. Thanks to supportive policies, the development of peptide synthesizer market in China will be faster and faster. Now, peptide synthesizers imported has occupied a large market share in China, and there is still a considerable gap between synthesizer made in China and abroad. For the application, today, most peptide synthesizers are applied in labs, both in universities and pharm companies. The market of peptide synthesizers used for commercial production is still limited, which is expected to get a large development once the peptide therapy industry makes a breakthrough.
