Peptides are short chains of amino acid monomers linked by peptide (amide) bonds, the covalent chemical bonds formed when the carboxyl group of one amino acid reacts with the amino group of another. Peptides are distinguished from proteins on the basis of size, and as a benchmark can be understood to contain approximately 50 amino acids or less. In this report, we study the peptide-based drugs. In the last several years, global market of Peptide Therapeutics developed rapidly, with an average growth rate of 7.7%. The major factors that are driving the growth of this market are the rising prevalence of metabolic disorders and the increasing pool of cancer patients. The technological advancements, resulting in a significant reduction in the production cost of peptide drugs, is also boosting this market remarkably. In 2017, global revenue of Peptide Therapeutics is nearly 28.5 billion USD; the actual production is about 150 million units. The classification of Peptide Therapeutics includes Injection, Oral and other, and the proportion of Injection in 2017 is about 74.2%, and the proportion is decreasing trend from 2013 to 2018.
