Percussion instruments are instruments which are played by shaking or hitting. There are many different kinds of percussion instruments. There is significant market concentration at the top of the industry as the 16 largest companies control more than 85 percent of the market from a revenue standpoint. Large companies include Gretsch Drums, Ludwig Drums and Remo. Lower-cost instruments are often made on assembly lines, while higher-quality instruments are produced at clusters of workstations. Typical tools include CNC drilling machine, Drum circle molding machine and Shell core machine, etc. Production involves manufacture of components and final assembly. Components, especially electronics, are often bought from other manufacturers. Technology is used in automation of assembly lines and through the use of computer-controlled machine tools. Computer systems are used in distribution to dealers and to manage inventory. Large retail chains require manufacturers to use business-to-business electronic ordering and purchasing systems. North America is the largest domestic producer of percussion instruments, the industry is also concentrated in Japan. Major customers are music distributors, music retailers, schools, and professional artists. Depending on the customer, sales are handled by independent

dealers, retail showrooms, an internal sales force, or telemarketing.
