Abstracts

The global PET Strapping market was valued at 622.57 Million USD in 2021 and will grow with a CAGR of 3.23% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Polyester strapping is characterized by a very consistent tensile strength and very high elongation. Characteristics that are most decisive factor for a safe and reliable strapping method. Unlike strapping made from steel, Polyester strapping having its very high elongation, is able to absorb shocks and impacts during transportation and handling far better than steel strapping is capable of. The excellent elongation allows the substitution for the same application with Polyester strap having a lower breaking strength. The PET Strapping mainly classified into two types: Embossed PET Strapping and Smooth PET Strapping. Smooth PET Strapping is currently the most popular type in Asia-Pacific accounting for about 70% market share.
