Pharmaceutical grade lactose is produced by concentrating whey or permeate (a co-product of whey protein concentrate production) to over-saturate the lactose, then removing, refining, drying and milling the lactose crystals. Pharmaceutical grade lactose is produced to meet rigid specifications, such as specific form and size distribution, monohydrate, crystalline, 40 mesh to 325 mesh, and a spray-dried mixture of crystalline and amorphous lactose for all applications. Typical use of Pharmaceutical Grade Lactose includes: as a diluent in tablets that have been manufactured by the wet granulation process, as a filling agent in capsule formulations and as a carrier for delivery of drug substances through inhalation.
