Pharmaceutical Logistics is the logistics of pharmaceuticals, medical and surgical supplies, medical devices and equipment, and other products needed to support doctors, nurses, and other health and dental care providers. Because it's final customers are responsible for the lives and health of their patients, medical logistics is unique in that it seeks to optimize effectiveness rather than efficiency. Medical logistics functions comprise an important part of the health care system: after staff costs, medical supplies are the single most expensive component of health care. To drive costs out of the health-care sector, medical logistics providers are adopting supply chain management theories. The classification of Pharmaceutical Logistics includes Non-cold Chain Logistics and Cold Chain Logistics. The proportion of Non-cold Chain Logistics in 2016 is about 93.5%, and the proportion of Cold Chain Logistics in 2016 is about 6.5%.
