Phloretin is a white powder solid. Phloretin is a dihydrochalcone, a type of natural phenols. The formula of phloretin is C₁₅H₁₄O₅. It can be found in the roots and peels of juicy fruits like apple and pear. Phloretin can be widely used as antioxidant and moisturizing factor in cosmetics. Phloretin is also widely used in food industry and pharmaceutical industry. In 2015, the world production of phloretin reached 11173 kg. Globally, phloretin producers are concentrated in China. Though derived from developed countries in early days, China manufacturers gasped the market of phloretin soon and dominated the world supply of phloretin in later years. In 2015, China has taken 85.85% of world phloretin production. Leading players in China are Golden Health Technology and Xian Lyphar Biotech, with a tail of other producers. The largest consumption area of phloretin is personal care. Skinceuticals and Cosmetic Skin Solutions consume large amount of phloretin to producer anti-aging essence. Phloretin can be used as edulcorant to inhibit the bitter and other uncomfortable taste in food by blends of other sweeteners NHDC or trilobatin. Phloretin can mask the unpleasant aftertaste of other sweetener. In 2015, personal care took the leading share of global phloretin consumption, with the share of 81.96%.
