Abstracts

The global Photocatalytic Coatings market was valued at 42.2 Million USD in 2021 and will grow with a CAGR of 7.78% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Photocatalysts are defined as substances that promote reactions by absorbing light without being altered themselves, before or after the reaction. There are various materials that show photocatalytic capability, and titanium dioxide is said to be the most effective. Photocatalytic coatings are a type of environmentally friendly new material, widely used, bright forward. As technology of Photocatalytic Coatings comes mainly from Japan, Japan has the largest market in application of Photocatalytic Coatings product and advanced Industrial manufacturing base attached with several leading manufacturing company: TOTO, Kon Corporation, Mitsubishi Chemical. The global Consumption value of photocatalytic coatings products rises up from 1.6 K MT in 2012 to 2.0 K MT in 2016. This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders` prefer. Recent years, the industry growth rate was slowing down because of the downstream demand. We tend to believe this industry now is in its infancy, and the consumption increasing degree will show an emerging curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin.
