Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Photochromism is a phenomenon in which a single chemical species changes the molecular structure under the action of light without changing the molecular weight and reversibly produces two isomers with different colors (absorption spectra). The key players are Tokuyama Corporation, Vivimed Labs, Milliken Chemical, Mitsui Chemicals, ESSILOR, Tianjin Forsheen Sunshine Technology and so on. Based on type, the market has been further segregated into T-Type Photochromic Material, P-Type Photochromic Material and Other (Inorganic). The T-Type Photochromic Material segment accounted for the largest market share in 2019. Asia Pacific dominated the industry.
