The global Physical Vapor Deposition (PVD) Equipment market was valued at 2124.33 Million USD in 2021 and will grow with a CAGR of 2.91% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Physical vapor deposition (PVD) describes a variety of vacuum deposition methods which can be used to produce thin films and coatings. PVD is characterized by a process in which the material goes from a condensed phase to a vapor phase and then back to a thin film condensed phase. End-use industries such as medical equipment and microelectronics are expected to increase the overall demand for products cured with PVD technology. Important applications of the PVD technology, such as microelectronics, data storage devices, cutting tools, architectural glasses, and medical equipment are in huge demand across a number of industries. The thriving automotive and construction industries are also expected to bode well for the expansion of the global PVD market. Rising focus on the inclusion of green power technologies in their energy mixes are driving the increased demand for effective solar energy products, which, in turn, is also expected to drive the market.
