The global Pick to Light market was valued at 63.32 Million USD in 2021 and will grow with a CAGR of 6.31% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Pick to Light uses light devices mounted at item locations on flow rack, shelving, workstations or other storage media to guide operators to the correct product locations and quantities required to fill an order. Also commonly called pick-by-light or light-directed picking, in the right application Pick to Light systems increase pick rate productivity and order accuracy by reducing the walking and reading associated with paper-based or even other semi-automated picking approaches. The key to Pick to Light is its simplicity. Operators scan a bar code license plate on a tote or shipping container to launch an order in their zone. Illuminated LEDs direct pickers to the right product location, and display the required unit quantity. After picking all pieces the operator confirms the completed activity, often by pressing a button on the device. They then proceed to the next illuminated location and repeat the process until all the necessary picks in their area are finished. Pick to light includes indicators, sensors, light curtains, operator/maintenance interface (hmi), gateway, connection components, software and so on. And a pick to light system includes different numbers of hardware and software. So the price and the volume cannot be counted. The growth of this market is propelled by the emergence of advanced automated warehouses, growth of the e-commerce

industry, and globalization of supply chain network. Moreover, pick to light offers error-free and better productivity operations and enhanced labor utilization. The retail and e-commerce industry is expected to capture the largest share of the pick to light market owing to the requirement of fast and efficient distribution of goods in this industry. Moreover, growing online shopping trend increases the use of pick to light systems in its warehouses for fast and accurate delivery of goods. Increasing competition among e-commerce companies has pushed them to offer same-day delivery and products at high discounts. Pick to light systems, along with other distribution center technologies, help expedite the order fulfillment process.
