Abstracts

The global Piezoelectric Accelerometers market was valued at 54.63 Million USD in 2021 and will grow with a CAGR of 3.19% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact wwhich will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Piezoelectric Accelerometers is a type of accelerometer that employs the piezoelectric effect of certain materials to measure dynamic changes in mechanical variables (e.g., acceleration, vibration, and mechanical shock). The leading companies own the advantages on better performance, more abundant product's types, better technical and impeccable after-sales service. Consequently, they take the majority of the market share of high-end market. Looking to the future years, the slow downward price trend in recent years will maintain. As competition intensifies, prices gap between different brands will go narrowing. Similarly, there will be fluctuation in gross margin. An IEPE sensor includes built-in electronics while a charge sensor does not. As a result, an IEPE sensor can convert the high-impedance output charge signal to a low-impedance voltage signal within the sensor itself while the high-impedance charge signal from a charge sensor must be converted at an outside charge amplifier. Because electronic are not included, charge sensors may be used at higher temperatures than IEPE sensors, since the temperature limitation is determined by the temperature limit of the crystals rather than built-in electronics. The industry is expected to remain innovation-led, with frequent acquisitions and strategic alliances adopted as the key strategies by the

players to increase their industry presence. Market stays in mature period with a clear concentration. Meanwhile, optimize product mix and further develop value-added capabilities to maximize margins.
