Pipe coatings are applied to protect the pipelines from corrosion, increase its shelf-life, maintain its flow, and to ensure the clean product delivery. There are four major types of pipe coatings, namely, thermoplastic, fusion bonded epoxy, metal, and concrete weight pipe coatings etc. A Pipe coating is a cost effective and viable solution to maintain pipelines` integrity. This coating provides a constant protective lining that helps save pipelines from the damaging effects of corrosion. Pipeline coating is one of the most reliable corrosion prevention methods used by industries today. North America is the largest consumption of Pipe Coating, with a sales market share nearly 27.00% in 2015. The second place is Middle East and Africa; following North America with the sales market share over 20.30% in 2015. Europe and China are another important consumption market of Pipe Coating.
