A piston pump is a type of positive displacement pump where the high-pressure seal reciprocates with the piston. Piston pumps can be used to move liquids or compress gases. There are mainly two kinds of piston pumps, which are lift pump and force pump. The more complicated types are the Axial piston pump and Radial piston pump. These types may be operated either by hand or by an engine. With the development of the technology in this industry, the piston pumps are more automated and intelligent nowadays, and can provide convenience for more complicated and high-standard projects. Some piston pumps are replaced by the rotary pumps or other pumps, but piston pumps are still applied in many fields and are the basic industrial products. There are many kinds of piston pumps in the market, the professional applications differed and the price also has a wide range according to different types. The European Union is the largest consumer market in the global Plunger Pump market. Major participants include Bosch Rexroth Corporation, Kawasaki Heavy Industries, FMC Technologies, Interpump Group, Annovi Reverberi S.P.A and so on. The industrial leaders are mainly located in the United States and the European Union.
