### Abstracts

The global Plastic Straps market was valued at 1390.82 Million USD in 2021 and will grow with a CAGR of 10.54% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Plastic Strap market. When plastic Strap was introduced, it was only natural that it was looked upon as a substitute for steel Strap. In one respect, it was - especially in those applications where steel had been used only because there was nothing available. Often, the steel was over specification in the first case. The existence of plastic Strap widens the range of Strap and offers new opportunities. A more important plastic Strap consideration is elongation recovery. Once tension has been applied and the strap has elongated, how hard will the strap try to return to its original length? With plastic, time changes the recovery. If you have a rigid load, polyester might be best. However, because it doesn't elongate much, it doesn't have room to recover. On a shrinking-type load, this can be a problem. Since both nylon and polypropylene elongate more than polyester, and have more room to recover, they would both be better choices. If a high level of retained tension is important, nylon would be the preferred choice and if retained tension is not important, polypropylene's lower price may change the choice. The Asia Pacific plastic straps market is projected to grow at the highest CAGR, in terms of value during the forecast period. The continuously rising middle-class of the Asia Pacific region and their increasing purchasing power and

disposable income have led to the growth of the paper, steel, and bricks & tiles industries in the region. This, in turn, has led to the increased demand for plastic straps from these industries, thereby fueling the growth of the Asia Pacific plastic straps market.
