A window screen (also known as insect screen, bug screen, fly screen, flyscreen or flywire) is designed to cover the opening of a window. It is usually a mesh made of metal wire, fiberglass, or other synthetic fiber and stretched in a frame of wood or metal. It serves to keep leaves, debris, insects, birds, and other animals from entering a building or a screened structure such as a porch, without blocking fresh air-flow. Some window screen made of steel or Polyester can be used for ETICS, facade and internal wall reinforcement. As the most famous meat processing areas in the world, America's animal husbandry industry will keep increase for the next few years and it will stimulate the increase of Plastics Coating Window Screen market.
