Platelets are blood cells responsible for forming clots to stop bleeding from the body. When a blood vessel is injured, platelets dash to that location and form clots at the injured place and prevent blood loss. For accurate formation of clotting appropriate number of platelets are required. Platelet aggregation systems (also referred to as an aggregometer) can be used to determine how well platelets stick together. Such a test measures platelet aggregation with the use of a platelet antagonist, such as ADP, thrombin, and ristocetin. Factors such as high output for pharmaceutical companies to screen targets for anti-platelet development, basic test for guarding patients at high risk of bleeding prior to surgery, increase in platelet disorders such as thrombocytopenia, growing acceptance for platelet treatment among cancer patients are driving the growth of Platelet Aggregation Devices Market. In addition on-going advancement in platelet aggregometer, coupled with growing frequency of chronic diseases such as arthritis, asthma are facilitating the growth of the platelet aggregation devices market. Furthermore, increase in numbers of aged people across the world is also boosting the growth of global platelet aggregation devices.
