The global PLGA market was valued at 45.06 Million USD in 2021 and will grow with a CAGR of 13.57% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

PLGA (poly (lactic-co-glycolic acid)) is a unique base polymer for controlled release of drugs and medical implant materials. It is both biodegradable and biocompatible, and since both monomers occur naturally it has minimal toxicity. PLGA is naturally amorphous (not crystalline).Currently, a few companies in the world can produce PLGA product, mainly concentrating in Europe and China. The main market players are Evonik, PCAS, Corbion, Mitsui Chemicals, SDSYXS, Jinan Daigang Biomaterial, etc. In consumption market, the growth rate of global consumption is smooth relatively. Europe, China and USA are still the mainly consumption regions due to the advanced production technology and rapid development of economy. PLGA is biocompatible and biodegradable, exhibits a wide range of erosion times, has tunable mechanical properties and most importantly, is a FDA approved polymer. Currently, a majority of manufacturers can offer microspheres comprised of four standard PLGA polymer ratios (50:50, 65:35, 75:25 and 85:15 Lactic Acid: Glycolic Acid). FDA has approved PLGA for micro and nano particles and for a number of therapeutic devices such as grafts, sutures, implants and prosthetic devices. With the development of economy, these industries will need more PLGA. So, PLGA has a huge market potential in the future.
