Abstracts

The global Polarizer Film market was valued at 121.3 Million USD in 2021 and will grow with a CAGR of 1.53% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Polarizer Film or Polarizing film is made by dyeing film (mainly polyvinyl alcohol (PVA)) or by iodine being adsorbed onto its surface, then stretching and orientating it. This gives the film polarization characteristics that allow only light with a certain oscillation direction to pass through it. Furthermore, in order to secure mechanical strength of the film, backing materials such as a TAC film or a protective film is laminated to it. Polarizer Film industry is relatively concentrated, manufacturers are mostly in the Japan, Korea and China. Among them, Japan output volume accounted for more than 50.00% of the total output volume of global Polarizer Film in 2016. Nitto is the world leading manufacturer in global Polarizer Film market with the market share of 26.17%, in terms of sales, followed by Sumitomo. LG Chem and Samsung SDI. Compared to 2015, Polarizer Film market managed to increase sales by 5.42 percent to 11520.93 million USD worldwide in 2016 from 10928.40 million USD in 2015. Overall, the Polarizer Film market performance is positive, despite the weak economic environment. With the increasing in production capacity, expected that the Polarizer Film raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of

Polarizer Film.
