The global Polishing Powder market was valued at 14.01 Million USD in 2021 and will grow with a CAGR of 8.11% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Rare earth polishing powder, is also called Cerium Polishing Powder and Cerium Oxide Polishing Powder, which mainly contains cerium oxide. It reacts with the surface to produce a complex Cerium-Oxygen-Silica compound softer than glass, this softer surface layer is easily used to produce final surface. Rare earth polishing powder is widely applied in jewelry and diamond, flat glass, CRT, LCD, TFT glass, mirrors, glasses, optical glass, lens, etc. There is no doubt that China is the largest producer of rare earth polishing powder. In 2017, China produced 27553 MT rare earth powder, holding 80.30% market share globally. However, it should be noticed that the capacity utilization rate in China is low due to the oversupply. The average utilization is below 30%. As for consumption, China is the largest consumers with 89.83% share in 2017. Europe is the follower, with 1814 MT rare earth polishing powder being consumed.
