Polyol Sweetener are organic compounds, typically derived from sugars. They are white, water-soluble solids that can occur naturally or be produced industrially from sugars. They are used widely in the food industry as thickeners and sweeteners. In commercial foodstuffs, sugar alcohols are commonly used in place of table sugar (sucrose), often in combination with high intensity artificial sweeteners to counter the low sweetness. On the basis of type, the sorbitol segment accounted for the highest market share in 2016. It is primarily used as a sweetener, humectant, flavoring agent, and diuretic dehydrating agent for various applications such as food & beverages, pharmaceuticals, and cosmetics & personal care products. It provides dietary energy and around 60% sweetness as against sugar. Sorbitol is also found naturally in several stone fruits and berries from trees of the genus, Sorbus. It acts as a sugar substitute or food additive that imitates regular sugar in taste.
