The global Polyphthalamide Resin market was valued at 11.05 Million USD in 2021 and will grow with a CAGR of 6.53% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Polyphthalamide (PPA) is a subset of thermoplastic synthetic resins in the polyamide (nylon) family defined as when 55% or more moles of the carboxylic acid portion of the repeating unit in the polymer chain is composed of a combination of terephthalic (TPA) and isophthalic (IPA) acids. PPA based resins are molded into parts to replace metals in applications requiring high temperature resistance such as automotive powertrain components, the housing for high temperature electrical connectors and many other uses. The base resin of PPA is generally modified by adding glass fiber, carbon fiber, minerals, and a combination of different materials to improve its properties. PPA resin has wide applications in under-the-bonnet automotive components, electrical and electronic devices such as LEDs, domestic appliances, and plastic components that are in contact with drinking water, in machinery parts, and in some personal care applications.
