Abstracts

The global Polyurea Coatings market was valued at 70.05 Million USD in 2021 and will grow with a CAGR of 1.83% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Polyurea coating is that derived from the reaction product of an isocyanate component and a resin blend component. It has a composition which is a combination of the above-mentioned two coating systems. The isocyanate component can be the same as for the 'pure' polyurea systems. The resin blend is a blend of amine-terminated and hydroxyl-terminated polymer resins and/or chain extenders. The resin blend may also contain additives, or non-primary components. To bring the reactivity of the hydroxyl-containing resins to the same level of reactivity as the amine-terminated resins, the addition of one or more catalysts is necessary. Europe, USA and China are the main consumption regions due to the larger demand in building & construction and transportation industry. In 2015, USA occupied 27.91% of the global consumption volume, while China takes market share of 15.92%. Leading consumption regions in Europe are Germany, France, UK, and Italy. The Polyurea Coatings industry has high technical barrier. The products are diversified, making it hard for customers to choose from one and another. Consequently, post sales technical services are crucial to downstream customers. To Polyurea Coatings manufacturers, the core of brand building is in quality control and technological innovation.
