## Abstracts

The global Polyurethane Catalyst market was valued at 1691.67 Million USD in 2021 and will grow with a CAGR of 6.11% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Polyurethane Catalyst can be divided into two broad classes: gelling catalysts and blowing catalysts. Gelling catalysts are more selective to catalyzing the reaction of the isocyanate with hydroxyl groups, whereas blowing catalysts are foaming catalysts; Blowing catalysts are more selective to catalyzing the reaction of the isocyanate with water to produce foam. When formulating a polyurethane foam system, it is important to have the correct ratio of gelling and blowing catalysts. If the ratio of gelling and blowing catalysts is incorrect, the foam will either lack physical integrity, or will be too dense. The industry's leading producers are Huntsman, Kao Corporation and Umicore N.V., which accounted for 13.44%, 12.30% and 10.04% of revenue in 2019, respectively.
