POS Terminals is a computerized replacement for a cash register. Generally, a POS terminal has as its core a personal computer, which is provided with application-specific programs and I/O devices for the particular environment in which it will serve. A POS system for a restaurant, for example, is likely to have all menu items stored in a database that can be queried for information in a number of ways. POS terminals are used in most industries that have a point of sale such as a service desk, including Entertainment, Healthcare, Hospitality, and Retail. The POS Terminals industry is relatively concentrated, the top ten manufactures production accounting 87% global market share in 2015. This trend has made the demand of Mobile POS Systems become larger and this trend can be anticipated to fuel the market growth during the forecast period. All manufactures in the world are committed to the improvement of product. These two years, some of Chinese manufactures can almost catch up with the world's leading technology too. Most technologies are developed by the manufacturers instead of importing from other companies. This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer. With the global economic recovery, more and more people pay attention to rising environment standards, especially in underdevelopment regions that have a large population and fast economic growth, the need of POS Terminals starch will increase. We tend to believe this industry now is close to mature, and the demand increasing degree will show a smooth curve.
