A position sensor is any device that permits position measurement. It can either be an absolute position sensor or a relative one (displacement sensor). Position sensors can be linear, angular, or multi-axis. The position sensor market for the automotive application is expected to grow at the highest rate between 2018 and 2023. Position sensors play an essential role in many parts of a high-tech or branded automobile. Position sensor finds its application in areas such as the body, powertrains as well as safety of the vehicle. Moreover, the growth of the automotive electronic control systems (ECS) due to the rising importance of safety and driver convenience feature is expected to significantly propel the demand for position sensors, thereby driving the growth of this market. Moreover, the market for automotive applications is witnessing an increasing demand across major regions such as APAC and Europe, thus this market is likely to grow with the highest rate between 2018 and 2023.
