The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Potassium hydroxide is a non organic compound, which is usually called as caustic potash. The colorless solid of potassium hydroxide-KOH is a prototypical strong base, which can also be found from the sodium hydroxide. It is the largest-volume potassium chemical for non-fertilizer use. Potassium hydroxide (caustic potash) serves a wide range of end use markets. The largest users of potassium hydroxide are the soap and detergent, fertilizer, and chemical industries. Minor uses include the production of molten salts, dyes, pharmaceuticals, and photographic chemicals. China is one of potassium resource-poor countries. The production of potassium hydroxide is mainly focus on Qinghai Province and Inner Mongolia. For production, the China production of potassium hydroxide will reach 607.5 K MT by the end of year 2015. For demand market of potassium hydroxide, there is also a certain space in the next few years.
