Abstracts

The global Potato Starch market was valued at 1917.99 Million USD in 2021 and will grow with a CAGR of 0% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Potato starch is starch extracted from potatoes. The cells of the root tubers of the potato plant contain starch grains (leucoplasts). To extract the starch, the potatoes are crushed; the starch grains are released from the destroyed cells. The starch is then washed out and dried to powder. Potato starch products are essential in the food, paper, adhesives and building and textile industries. The major manufacturers mainly concentrate in Europe, North America, Japan and China. In 2016, Europe production share took 73.5%, North American Potato Starch production share was about 6.9%, and Japan production share also took 6.4%. China took about 10.7%. Europe is mature and the largest market of potato starch production, growth in the future may be mainly in Poland and other eastern European countries. But we believe that China and India will become the strongest growth of this market in the world in the future because of the fertile resources and huge demand, when they breach the technical bulwark and develop the market chain.
