Potting compound, also known as electronic glue, is a widely called. For electronic components bonding, sealing, potting, and coating protection. Potting is liquid before not curing, with liquidity, glue viscosity according to product quality, performance, different production processes vary. Potting completely cured before it can achieve it using value, after curing can play the effects of waterproof, dustproof, insulation, thermal conductivity, confidentiality, anti-corrosion, temperature, shock. The electronics sector is the largest application for potting compound globally. Potting compounds are used to protect, insulate, and conceal circuitry, components, and devices. They are formulated to meet the requirements of many demanding applications in the electronics and electrical sector such as consumer electronics, transportation, aviation, marine, energy & power, solar power, and others. Potting in both electronic and electrical applications are done to reduce internal stress, achieve excellent dielectric properties, electrical insulation, thermal conductivity, thermal shock resistance, mechanical strength, adhesion, hardness, cure speed, and chemical resistance. Asia-Pacific is the global forerunner in the potting compound market, in terms of value and volume, and the trend is expected to continue till 2021. Countries in this region such as China, India,

Japan, South Korea, and Malaysia are witnessing significant increase in the use of potting compounds in electronics & electrical applications.
