The global Power Connectors market was valued at 1737.54 Million USD in 2021 and will grow with a CAGR of 4.51% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The power connector includes an insulative housing and a plurality of terminals. The insulative housing has a plurality of receiving slots for receiving the terminals. The insulative housing is further provided with at least one tab, and the tabs isolate the terminals. The terminals respectively have a barb, and the terminals respectively extend outwardly from the first sides of the barbs to form a plurality of contact portions, and the plurality of wires are fixed on the second sides of the barbs; through the above structure, the barb insertion of the terminals can be achieved in the insulating body, and the terminals are easy to assemble, it is only necessary to push into the insulating body, and the short-circuit equivalent energy does not occur between the terminals. Asia Pacific was a major market for Power Connector in 2018 and is estimated to expand due to the rising number of industries. Asia Pacific and North America leads the global Power Connectors market in terms of demand. The market in the region is dominated by the China, due to high Vehicle production and consumption in the country along with Data Communications.
