## Abstracts

The global Power Quality Meter market was valued at 895.51 Million USD in 2021 and will grow with a CAGR of 4.18% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Power quality is measured according to the quality with which it is delivered to the end customers; power quality is deemed as high when it has clean sinusoidal waveforms without any spikes, sags, and other electrical disturbances. It should also be free from transients, harmonics, and other such distortions. Over the years, with the advances in technologies and equipment, power quality has become a major issue for power providers and their customers. Based on end-user, the industrial & manufacturing segment recorded the largest market size in 2017. Globally, industrial and manufacturing activities contribute approximately 30% of the economy. Consequently, reliable, efficient, and uninterrupted power supply becomes the inevitable requirement for the industrial facilities, nowadays. Any kind of power interruption or outages can affect crucial industrial operations and can result in huge losses. Developed economies in North America and Europe are facing the heat for the poor power quality and are investing huge amounts to curb the same.
