The global PP (Polypropylene) Nonwoven Fabrics market was valued at 31.24 Million USD in 2021 and will grow with a CAGR of 8.66% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Polypropylene (PP), also known as polypropene, is a thermoplastic polymer used in a wide variety of applications. It is an addition polymer made via chain-growth polymerization from the monomer propylene. Polypropylene can be produced in a variety of structures giving rise to applications including packaging and labeling, textiles, plastic parts and reusable containers of various types, laboratory equipment, automotive components, and medical devices. It is a white, mechanically rugged material, and is resistant to many chemical solvents, bases and acids. The outpouring demand for disposable consumer products is a key driving factor for the global market. Increasing consumer preference towards PP nonwoven fabrics over other nonwoven fabrics owing to its superior quality and advantages in manufacturing hygiene products is the key factor expected to boost the demand over the forecast years. In addition, increasing environmental concerns coupled with stringent regulations from government bodies such as EPA is expected to hamper the market growth over the forecast period. APAC leads the market, followed by Europe. However, Middle East and Africa is expected to be the fastest growing market for the forecasted period in terms of demand.
