Abstracts

The global Precast Concrete market was valued at 8555.44 Million USD in 2021 and will grow with a CAGR of 4.4% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Precast concrete is a construction product produced by casting concrete in a reusable mold or 'form' which is then cured in a controlled environment, transported to the construction site and lifted into place. In contrast, standard concrete is poured into site-specific forms and cured on site. Currently, Asia Pacific is the largest consumer of precast concrete products, with China, India, Japan, Indonesia, and Australia being the major markets. The Asia Pacific precast concrete market is projected to register the highest CAGR during the forecast period. The growth of the building & construction industry and improvements in financial conditions in the region have led to the increase in demand for precast concrete elements. The growth of the precast concrete market in these countries is driven by factors such as an increase in construction activities of residential and non-residential buildings, the rise in population, and economic development of the region.
