The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Precast construction is a type of construction, wherein pre cast (any material that is in its final shape before being positioned at its original location) construction structures are used. Concrete, and steel in some cases, is generally used in precast construction. These structures are manufactured beforehand in a plant, which is located away from the actual construction site. These precast construction components are then transported and later assembled mechanically with the help of anchor bolts at the actual construction site. High early strength cement is cured with the help of steam curing and casts can be formed within a duration of 24 hours. Buildings can be constructed faster and at a much cheaper rates through precast construction. Components used for precast construction are generally standardized. This helps in providing better quality to structures as compared to site-cast concrete, as they are manufactured in a controlled condition. Precast construction components are more durable and hence can also be reused later. Controlled conditions while manufacturing precast allows better control of surface finishes. Compared to site-cast, precast construction components can be erected faster and are affected less by adverse weather conditions, making it comparatively safer. Precast components in construction are used for residential as well

as nonresidential complexes. Among nonresidential complexes, these components are useful in the construction of stadiums, parking lots of shopping complexes, bridges, etc. The use of precast construction components in the non-residential sector is expected to rise in the near future. The precast construction market is expected to expand at a rapid pace due to the increasing demand for new construction across the globe. During the recent times, there has been an increase in the investments in public and the private infrastructure sectors in major economies. This is expected to drive the market for precast construction in the next few years.
