Abstracts

The global Prepreg market was valued at 5767.76 Million USD in 2021 and will grow with a CAGR of 6% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Pre-preg is 'pre-impregnated' composite fibers where a thermoset polymer matrix material, such as epoxy, is already present. The fibers often take the form of a weave and the matrix is used to bond them together and to other components during manufacture. The thermoset matrix is only partially cured to allow easy handling; this B-Stage material requires cold storage to prevent complete curing. B-Stage pre-preg is always stored in cooled areas since heat accelerates complete polymerization. Hence, composite structures built of pre-pregs will mostly require an oven or autoclave to cure. Asia-Pacific is expected to be the fastest-growing market for prepreg between 2018 and 2023. The growth in the wind energy industry, large investment by government in aerospace & defense, and new product developments by various leading players are a few factors leading to the growth of the market of prepreg in this region. China leads the market of prepreg in Asia-Pacific. Its consumption of prepreg has grown remarkably due to growth in the wind energy, sporting goods, and aerospace & defense industries.
