## Abstracts

The global Prescription Sunglasses market was valued at 508.66 Million USD in 2021 and will grow with a CAGR of 5.14% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Prescription sunglasses are used for the protection of eyes from the harmful ultraviolet radiations which can cause permanent damage to the eyes. The prescription sunglasses are an effective way of limiting exposure of eyes to safe levels along with the dropping glare levels. These sunglasses are available in a wide range of sizes and styles for the people suffering from myopia, hypermetropia, presbyopia, and astigmatism. Increasing usage and acceptance of eyewear products in general, and prescription eyewear in particular, is a critical driver for eyewear market growth. Rapidly changing fashion trends along with increasing buying power is anticipated to positively impact the industry growth. Aggressive promotions by the companies about latest trends are projected to increase awareness among customers. Significant technological developments, urbanization and increase in population are the key driving factors for the prescription sunglass market. Increasing demand for these lens materials coupled with growing purchasing power in the developing countries is expected to positively impact volume sales.
